

# ZENPRISE® EXPENSE MANAGER

## GET WIRELESS EXPENSES UNDER CONTROL

With the right tools to track and analyze enterprise-wide smartphone utilization, you can make timely and informed decisions around your wireless spend. As mobile devices proliferate in your organization and employees spend more time using these devices, increased mobility will impact your bottom line. Zenprise Expense Manager brings enterprise-level expense tracking capabilities to the Zenprise MobileManager™ platform so you can manage mobility for a positive impact.

### RECLAIM UNUSED SMARTPHONES

Now you can identify smartphones that are still expensed to the company but not in use. Zenprise Expense Manager identifies devices on your wireless plan with no activity for the past 30, 60 or 90 days. With Zenprise, you can save thousands of dollars simply by decommissioning unused devices. For example, a customer with 1,000 smartphones can expect to save on average \$45,000 per year by de-provisioning unused devices.

### LOWER MONTHLY CELL PHONE BILLS

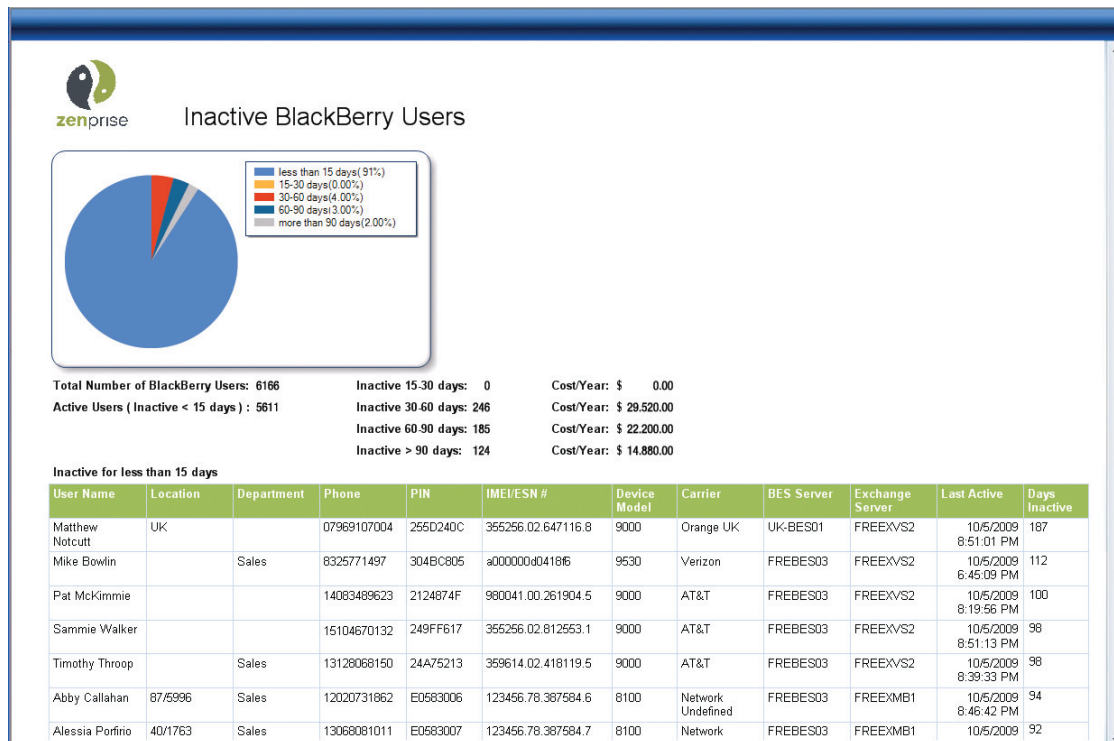

Zenprise identifies actual smartphone utilization rates down to the individual user level. You can assess end-user smartphone utilization during business versus non-business hours, and then optimize plans according to business policies.

### NEGOTIATE BIGGER DISCOUNTS WITH CARRIERS

Zenprise provides real-time and historical reports that highlight the distribution of consumer-owned and employee-liable smartphones by carrier. Start negotiating carrier volume discounts with the confidence of knowing you have accurate data at your fingertips, with Zenprise.

### KEEP INTERNATIONAL ROAMING RATES LOW (COMING SOON)

Monthly voice and data costs can quickly spiral out of control as mobile workers travel internationally. Zenprise provides a real-time view of users who are roaming outside the U.S., and allows you to set alerts so that finance or another department can establish an international roaming plan without delay.

With Zenprise you can reclaim unused smartphones and reduce costs.
